

Buddytalks

Hosted by: Ingeborg Bloem

Project Information (EN)

BuddyTalks is a subtle, elegant wearable communication device designed for elderly people, the visually impaired, and those who are less digitally literate. It’s not a watch, not a phone — but a warm voice close to your heart or worn on your wrist. BuddyTalks responds to voice, not screens or apps. With just one intuitive button and a softly pulsing amber light that tells you it’s listening, speaking, or resting, it offers presence without pressure. At Dutch Design Week, visitors will experience a carefully crafted presentation: a soft, tactile unboxing where form, function, and emotion meet. They’ll be able to hold the device, feel how light and gentle it is, and sense the calm simplicity of its use. No unnecessary tech. No overstimulation. Just human warmth, simplicity, and connection. Vision, Purpose & Core Values In a world dominated by screens, algorithms, and digital loneliness, BuddyTalks returns to the essence of human contact: a voice that truly listens. Core Values: Simplicity in use Kindness in design Connection between people BuddyTalks is not a mass-market gadget. It’s a lovingly designed bridge between technology and humanity — a voice with a heartbeat. Extension for DDW Project Description BuddyTalks – A Human-Centered AI Companion In addition to its minimalist design and dual functionality as pendant and wristband, BuddyTalks offers more than just practical support. It is a warm, intuitive companion that allows for simple, spoken interaction with AI — including models like ChatGPT. Now with AI conversation capability BuddyTalks enables a natural voice conversation between user and AI (like ChatGPT). No screens, just speech — intuitive, warm and hands-free.
