

Adapt Materials

Living Lab for secondary raw materials processing - a transformationproject in the context of the circular society
Adapt Materials

Hosted by: Fanni Florian

Project Information (EN)

Waste as a resource

Adapt Materials develops new products, concepts out of what others call "waste" and wants to work with small regional and sustainability-driven companies to help them on their way to a circular zero waste production by designing new use cycles for their residual materials. The redesign is always subject to the requirements of the source material to maintain and never degrade the recyclability of the materials to be part of the shift towards a circular economy.
