Down to Earth Dating

Down to Earth Dating

Hosted by: Network of Entrepreneurial Educationalist

Project Information (EN)

An important part of the problems with the climate is the way we relate to all other living beings. In the west we consider ourselves as the most important living beings for which the rest of nature is something that serves us. Inspired by the research of professor Matthijs Schouten we believe that by becoming partners or friends with nature, our habits will also be influenced in the way we deal with the climate crisis. From antropocean to symbiocean. We want to answer the question: How to start a friendship with nature? For that we have three small experiments: - the sit spot in front of a tree - first date with a shrub, a pile of earth, a snail - standing in the shoes of a tree or the earth Each experiment lasts 15 minutes. Before and after we ask you a simple question: what is your relationship with nature? We are curious if we can find ways to influence that relationship.
