

Blended Objects

A collection of ceramic elements crafted entirely from ceramic and demolition waste
Een collectie keramische elementen, volledig vervaardigd uit keramiek- en slooppafval

Hosted by: Studio KENNSK

Project Information (EN)

Tailored for interior designers and architects

Presenting at the Driven by Purpose exhibition, Blended Objects showcases the transformation of recycled ceramics into modular elements. Through experimentation with forms and glazes, Studio KENNSK exemplifies the beauty of the reclaimed materials. The modular elements are designed to enhance interior spaces and can be easily rearranged or replaced. Made-to-order for interior designers and architects, the collection offers endless possibilities for elevating architectural designs.

About Studio KENNSK

Studio KENNSK, based in The Hague and founded by Mara Skujeniece and Susanne Kennedy, is a design studio specializing in spatial design, material research, and product design. The studio's work is guided by a commitment to create environments that leave a profound physical and emotional impact, engaging all the senses, in both public and private spaces. With a strong focus on sustainable design, Studio KENNSK continually explores and questions the materials they use, thoughtfully integrating ecological, cultural and historical references into their design process.

About Blended Materials

After graduating from the Design Academy Eindhoven in 2011, Tom van Soest founds StoneCycling® (now FRONT®), a company that focusses on producing building bricks from construction and demolition waste. The first project using these WasteBasedBricks® was built in 2016, leading to global success and the upcycling of 3,370,871 kg of waste by 2023. At the end of 2023, Tom leaves StoneCycling® to pursue his new venture Blended Materials: a company that creates and designs tiles and interior products handmade entirely from waste without the use of any raw materials.

Projectinformatie (NL)

Made-to-order voor interieurontwerpers en architecten

Tijdens de Driven by Purpose expositie presenteren we Blended Objects dat de transformatie van gerecycled keramisch materiaal in modulaire elementen toont. Door te experimenteren met vormen en glazuren laten we de esthetische waarde van de herwonnen materialen zien. De modulaire elementen zijn ontworpen om interieurs te verrijken en kunnen eenvoudig worden verplaatst of vervangen. Made-to-order voor interieurontwerpers en architecten, biedt de collectie eindeloze mogelijkheden om architectonische ontwerpen te versterken.
