

QUBIT

Hosted by: KIDZ Studio

Project Information (EN)

The QUBIT lamp is a conceptual lighting object that explores the relationship between the present and the uncertain paths of the future. The design consists of two main elements: a glass cube with rounded corners, a small platform and several flexible legs Flexible legs allow the user to physically change the position of the lamp, changing its balance, direction and appearance. This interactivity serves as a metaphor for how our choices affect future opportunities. The glass cube emits soft diffused light, enhancing the idea of the present as an illuminated, tangible reality, and the adjustable legs indicate that the future is changeable and open to change QUBIT is more than just an object of illumination - it is a tactile representation of philosophical concepts, encouraging users to agree with the idea that the future is not fixed, but shaped by our actions.__

Projectinformatie (NL)
