

Arceo Flow

“A line born from a single fluid gesture, free in space, that becomes a light” ARCEO Flow is our new light, fluidity, and movement exploration.
Een lijn geboren uit een enkele vloeiende beweging, vrij in de ruimte, die licht wordt. ARCEO Flow is onze nieuwe verkenning van licht, vloeibaarheid

Hosted by: Studio Joachim-Morineau

Project Information (EN)

Arceo Flow lights

First unveiled in Milan this April, our new ARCEO FLOW lamps explore the boundary between installation, drawing, and luminous object. For Dutch Design Week, we’re presenting several new versions!

Our lamps are made with frosted plexiglass tubes that house a 360° LED neon on an aluminum base. They are available in several color temperatures for the right atmosphere.

All the luminaires are designed and assembled in our workshops in Eindhoven and Nantes.

A line born from a single fluid gesture, free in space, that becomes a light.
ARCEO Flow is part of our new light, fluidity, and movement exploration. Its curves evoke the fluidity of a freehand-drawn line while engaging in dialogue with the surrounding space. The pieces integrate into architecture like a luminous trace, light, and sculptural. Each thermoformed plexiglass tubes hold a 360° LED neon, set into a precision-machined aluminum base. ARCEO Flow explores the boundary between installation, drawing, and luminous object.

The series was presented for the first time at the Good Selection exhibition in Milan in April 2025.

All the luminaires are designed, manufactured and assembled in our own workshop. Being based between France and the Netherlands allows us to bring together two design cultures: the poetic and sensitive tradition of French craftsmanship and the experimental and innovative approach of Dutch design. This fusion feeds a singular practice that questions the place of light in contemporary space.

Projectinformatie (NL)

Arceo Flow licht

Voor het eerst gepresenteerd in Milaan deze april, verkennen onze nieuwe ARCEO FLOW-lampen de grens tussen installatie, tekening en lichtobject. Voor Dutch Design Week tonen we verschillende nieuwe versies!

Onze lampen zijn gemaakt van mat plexiglas waarin een 360° LED-neon op een aluminium voet is geplaatst. Ze zijn verkrijgbaar in meerdere kleurtemperaturen voor de juiste sfeer.

Alle lampen worden ontworpen en samengesteld in onze ateliers in Eindhoven en Nantes.
