

Designing a Wearable for complex care

Livestream: 22 Oct 10:00-11:00

Livestream: 22 okt 10:00-11:00

Project Information (EN)

Wearable sensors are promising as a supportive technology in the care of people with dementia. However, stakeholders (i.e., (in)formal caregivers of people with dementia) indicate that the design of commercially available wearables are not suitable for pe

Projectinformatie (NL)

Draagbare sensoren (wearables) zijn veelbelovend als ondersteunende technologie in de zorg voor mensen met dementie. Stakeholders (zoals (in)formele zorgverleners van mensen met dementie) geven echter aan dat het ontwerp van commercieel verkrijgbare weara
